

Double Basket Assembly Instructions

Required Pieces:

- Hook
- 2 x top hangers (U-shaped)
- 4 x lower hangers
- 2 x baskets

Assembly instructions:

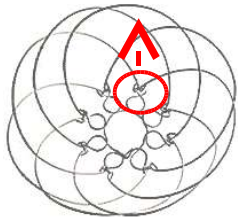

Step 1: Hang hook.

Step 2: Place top hangers through hook.

Step 3: Shaping the basket. Hold the outer edge of the basket, with the base rings (indicated in diagram) facing up.

Then draw the outer edges of basket into together. The basket will begin to fold and to start to take shape. Rotate the basket while squeezing up the edges to keep the basket sides even.

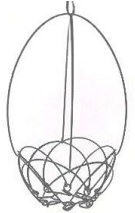

Step 4: Attach basket to hangers. Firstly ensuring top hangers are crossed before attaching basket. Crossing the hangers assists in balancing the basket when hanging. Place hanger hooks on cross sections of baskets an equal distance apart as shown in picture.

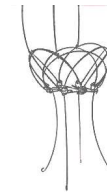

Note: This will depend of the size of the basket. As larger baskets have more sidepieces which mean more crosses and therefore the hangers should be spaced evenly around the basket for balance.

Lynne Wilson

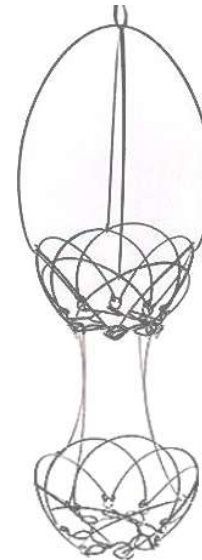

Step 5: Once done secure basket by squeezing up the hooks with a pair of pliers. The basket should now resemble the picture.

Step 6: Next attach the lower hangers. These are to be hung on the base crosses, as indicated in Step 3 and they also require to be evenly spaced around the basket.

Step 7: Lastly repeat steps 3,4 and 5 for the second basket. Once completed the basket should resemble the picture below.

Note: Appearance may vary slightly depending on the size of the baskets.

Tripple & Quad Baskets

Use the same assembly process as the double baskets. Steps 3,4 and 5 are repeated for the required number of baskets.
